

Vmoso Enterprise Transformation Methodology

As organizations embark on programmes of digital transformation, managing collective knowledge is becoming more important than ever. Knowledge is increasingly lost in employees' email inboxes, or fragmented across a chaotic assortment of new communication tools brought in to address email's failings.

Vmoso

Vmoso is a cloud-based mobile-centric platform for empowering digital transformation. A platform that brings together knowledge management, enterprise communication, workplace collaboration and business engagement. Unifying short and long form communication, content sharing, workflow and social networking in one tool with the added benefit of enterprise-level security features, Vmoso is used across all areas of business to save time and simplify getting work done.

More than a technology implementation programme

At Vmoso, we understand that getting your corporate knowledge under control is more than just a technology implementation programme. The Vmoso Enterprise Transformation (VET) methodology is a 10-step iterative process that refines working practices and establishes Vmoso at the heart of your enterprise communication and collaboration.

VET help organizations:

- Identify and integrate existing knowledge sources
- Capture new knowledge at source and index it for easy access
- Define collaborative processes to add accountability to business communication
- Devise and report upon meaningful metrics that link directly to business objectives

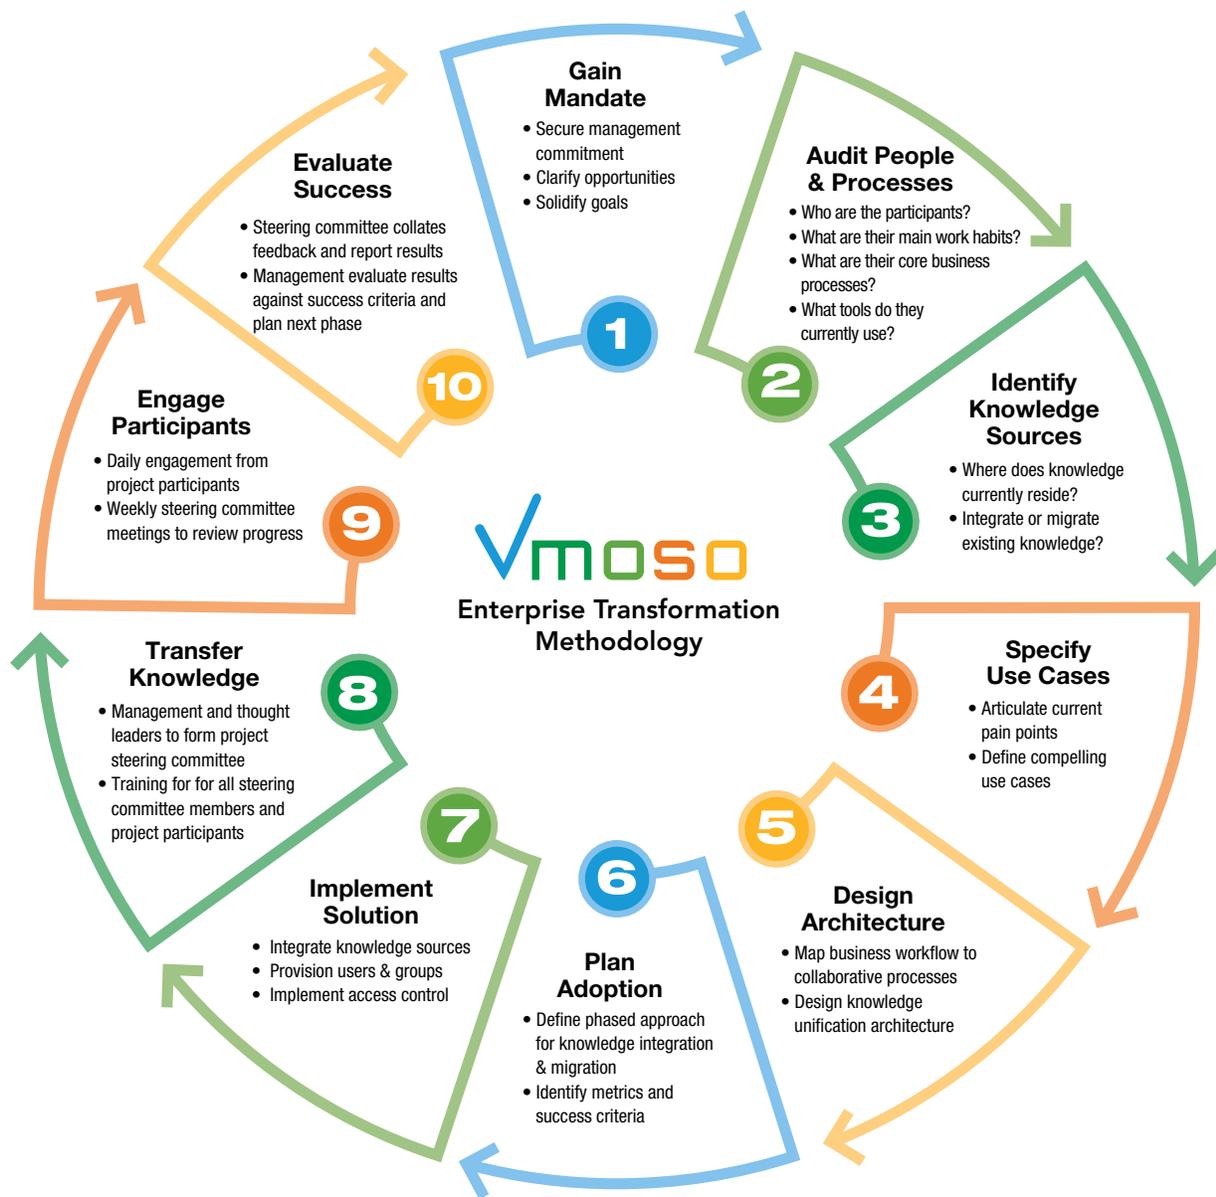

We know that the hardest part of any project to adopt new technology is getting started. Many employees remained wedded to working practices that discourage effective collaboration and impede the flow of information around the company. The VET methodology engages with all participants and stakeholders to drive behavioural change alongside Vmoso product implementation.

We're here to help

Vmoso Professional Services (VPS) have been assisting leading enterprises around the world with their digital business initiatives for more than 20 years. Throughout the VET process, consultants from the VPS Digital Transformation Group are here to help you. We'll take part in your steering committee meetings, assist with project scoping and implementation, and training project participants.

Continuous Improvement

VET is a continuous improvement programme. At Vmoso, we understand that behavioural changes take time and the end goal is only reached through a series of smaller steps. The results of one phase of the project feed directly into the definition of the next. Each iteration delivers invaluable data about which initiatives have worked, and which need to be reviewed. So the journey from noise and miscommunication to a streamlined “big knowledge” environment is taken gradually, not as one big leap.
